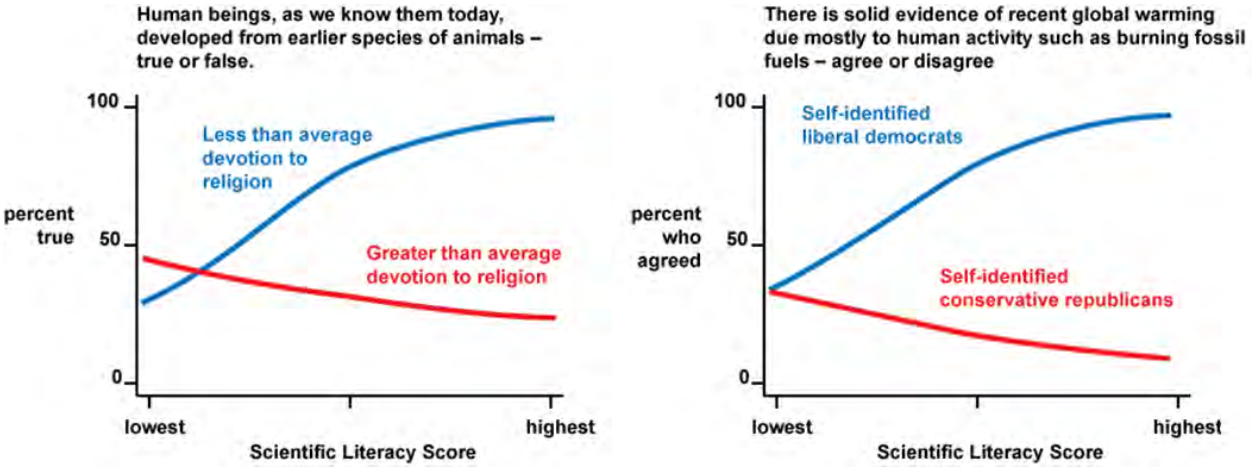
BIOC 122 : BIOLOGY FOR VOTERS Spring 2018

Course learning goals

Our overarching learning goal is to become an informed voter in areas related to science and especially to biology. An informed voter should be able to set personal bias aside and make informed, rational decisions concerning political and social issues.

To what extent does personal bias influence our opinions? Consider the responses to the statements at the top of the two figures reproduced below[1]. Scientific literacy was measured by percentage of correct answers to questions such as "electrons are smaller than atoms – true or false." Perhaps surprisingly, the greatest differences were among individuals who were most scientifically literate.



[1]Redrawn from: Kahan, Dan M. Climate-Science Communication and the *Measurement Problem*. *Advances in Political Psychology*, 20 Feb 2015. DOI: 10.1111/pops.12244

Without taking a stance on who is "right" or "wrong," we can conclude that a significant percentage of voters do not understand the process of science, do not have a sound knowledge of basic science, have difficulty identifying reliable sources of information, and/or do not or cannot employ objective reasoning as they develop an opinion on matters related to science.

Learning objectives

As you look over the learning objectives for this course, be cognizant of one objective that is not among them. You are not expected to submit to the orthodox viewpoint in any area. On the other hand, you will be expected to be able to defend your viewpoint regardless of the position that you take on a subject. You will have to defend the credibility of your sources and will be expected to present rational explanations that employ logical reasoning.

Objective 1: Develop a solid understanding of the process of science and an appreciation for the credibility of scientific research and theories

1. Be able to distinguish what is in the realm of science from what is not in the realm of science
2. Learn to apply skepticism of a scientist

3. Learn to distinguish scientific fact from fiction, theory from conjecture, valid from spurious arguments, and to distinguish truth from myth or misconceptions
4. Be able to correctly explain what is mean by a scientific theory
5. Be able to distinguish what a theory claims from what it does not claim
6. Be able to cite examples of the slow, deliberate, progressive nature of science

Objective 2: Obtain a working knowledge of fundamental concepts in biology

1. Learn the roles of macromolecules and organelles in the function of living cells, and the roles of cells, tissues, and organs in the function and survival of living organisms.
2. Be able to explain the role of evolution, especially common ancestry and natural selection, in biology and biological research. *No concepts are more fundamental to biology than common ancestry and natural selection (i.e., evolution). Physical explanations for the formation of the universe, solar system, appearance of life on earth, and origin of species are common themes that will run throughout the course.*
3. Be able to explain the processes and consequences of gene expression, including how genetic information is stored, replicated, and inherited, how phenotype stems from gene expression, how genetic changes guide human development from egg to adult, and how gene expression can go awry, leading to cancers, immune deficiencies, etc.

Objective 3: Be able to recognize and access credible sources of information in biological and biomedical science

1. Be able to conduct a productive search for reliable information using the internet
2. Be able to distinguish reliable from less credible internet sources, cite evidence, and defend your sources
3. Be able to access and read a peer-reviewed journal article

Objective 4: Be able to convincingly present a point of view orally, in writing, and/or by using visual aids

1. Prepare and conduct an oral presentation that accurately and effectively presents a scientific topic to a lay audience, including support materials such as a PowerPoint slide show, handouts, posters, models, etc., as needed
2. Provide informative answers to questions from an audience, and
    - be prepared to challenge spurious claims and arguments that misrepresent scientific concepts and/or the process of science
    - be prepared to explain how evidence led to an explanation
    - be able to explain the faulty reasoning behind myths and misconceptions surrounding a explanation, including scientific theories
3. Respect the views of others and refrain from uncivil behavior, no matter how passionate you are about the subject.

Note to prospective BioSciences majors

In addition to the learning goals listed above, an objective of this course is to encourage students with strong interests in biology to consider a major in BioSciences. If you decide to pursue the major you will need to take Introductory Biology (BIOC 201). BIOC 122 is good preparation but is not a substitute for BIOC 201.

Course Syllabus

Jump to Today ✎ Edit

Policies, Topics, and Activities for Spring 2018

NOTE: This course syllabus is a work in progress, pending information on class size and student input on special topics to be covered. This syllabus subject to change at any time, with adequate notice.

Much of the learning in this course will take place in class, mostly through group work and discussions. Much of the learning will also take place as you prepare for class. Preparation will include searching for information and preparing class presentations. There will be some lecturing, but this is not a traditional lecture course, and we do not use a textbook.

Instructor and office hours

Instructor: David R. Caprette, Ph.D.
Teaching Professor, BioSciences
Office and contact information: ABL 327, caprette@rice.edu, x3498
Office hours: 10:30 to 12:30 MW or by appointment

Schedule

BIOC 122 will meet Tuesdays and Thursdays from 10:50 am to 12:05 pm, GRW 160A. We will follow a "rolling schedule" such that we will take as much time on each topic as we need and then move immediately to the next topic.

- Ask any questions you may have, make any points that you wish to share with the class, and clear up any confusion or misunderstandings that you may have before we leave a subject
- When the next topic comes up, any assignments associated with that topic will come due immediately, including group presentations; I will try to provide plenty of advance notification

Topics

The course and assignment schedule is a work in progress and the dates are approximate. How fast we go depends on long our discussions take on each topic. You also have the opportunity to suggest additional topics, and I will fit them in if I can. PowerPoint slides will be posted in Files (folder: Spring 2018 slide sets) as pdfs after the corresponding class.

- Tuesday Jan 9 –
  - Preparation: see the assignments "Group behaviors" and "Scientists"
  - Introductions: students and instructor; introduction to active learning; introduction to Socrative; examples of mistrust of science (hazardous materials spill, Harry Truman and the volcano); course

learning objectives; group assignments; discussion - famous (and infamous?) scientists
  - Slide set to be posted in Files: Intro.pdf
- Thursday Jan 11 –
  - Preparation: see the assignment "Evolution background"
  - Science, pseudoscience, and just plain nonsense – how does science "work?"
  - Discussion: what topics would you like to explore in this course?
  - Assessing the credibility of internet web sites
  - Slide set to be posted in Files: Science.pdf
- Tuesday Jan 16 –
  - Class canceled due to weather
- Thursday Jan 18 –
  - Evidence for descent with modification (evolution)
  - Myths and misconceptions about evolution
  - Slide set to be posted in Files: Change.pdf
- Tuesday Jan 23 –
  - Preparation: see the assignment "Natural selection background"
  - Turn in the pre-class assessment, handed out in the prior class
  - Discussion: websites on natural selection
  - What is the driving force behind descent with modification? What is the evidence to support Darwinian evolution?
  - How do we define fitness in a Darwinian sense?
  - What are some of the myths and misconceptions about natural selection and why are they myths/misconceptions?
  - Slide set to be posted in Files: Fitness.pdf
- Thursday Jan 25 –
  - Preparation and on-line assignment: Case studies in natural selection (in Files)
  - Is it or isn't it? Discuss the case studies
  - [time permitting] Can natural selection explain altruistic behavior?
- Tuesday Jan 30 –
  - First "mini-exam" (30 min) - process of science, evidence for descent with modification and natural selection, principles of natural selection and case studies
  - Finish evolution of altruism
  - Slide set to be posted in Files: Altruism.pdf
- Thursday Feb 1 –
  - Where did it all come from? Theory combined with informed speculation on the "origin of everything" and how conditions compatible with life in our Universe came to be
  - Slide set to be posted in Files: Origins1.pdf
- Tuesday Feb 6 –
  - Preparation and on-line assignment: biological molecules (macromolecules.pdf in Files)
  - Why do we look for water when we look for life elsewhere in the solar system or for extra-solar life?
  - Slide set to be posted in Files: Sixty_percent.pdf
- Tuesday Feb 13 –
  - NOTE: I do not expect to finish Origins2 today; we may not finish the "sex" classes by the end of the

day Thursday Feb 22; I've set Thurs Feb 27 aside as a "catch up day" and will perhaps slip in a short subject or two if there is time.
    - Preparation: Assignment "Biomass"
    - Workshop on biomolecules
    - Could life have spontaneously arisen on earth? Some models for an abiotic origin
    - Where did Earth's oxygen come from, origin of chloroplasts, mitochondria, and just what do chloroplasts and mitochondria "do?"
- Thursday Feb 15 –
    - Finish Origins2
    - What's the big deal about embryonic stem cells?
    - Slide set to be posted in Files: Origins2.pdf
- Tuesday Feb 20 –
    - Second "mini-exam" (30 min) - Evolution of altruistic behavior, origin of everything & conditions required for life, water and biological molecules, models for life's origin on earth, mitochondria, chloroplasts, and biomass
    - Began "Sex part 1" – When does life begin? Or, maybe, when does a new individual really become human? We'll start to look at fertilization and early human development, plus some background on birth control, and and an early somatic cell mutation
- Thursday Feb 22 –
    - Finished "Sex part 1"
    - Begin "Sex part 2" – In what ways can development go wrong? What happens when meiosis goes wrong? Some consequences of abnormal gastrulation, aneuoploidy (abnormal distribution of chromosomes), .
    - Slide set to be posted in Files: Sex1.pdf
- Tuesday Feb 27 –
    - Finish "Sex part 2"
    - Begin "Sex part 3" – Men are men and women are women – except when they aren't! Biological sex isn't as simple as some people think
    - Slide set to be posted in Files: Sex2.pdf
    - Slide set to be posted in Files: Sex3.pdf
- Thursday Mar 1 –
    - Preparation: Mutations and human pedigrees
    - Human genetic disorders and their inheritance
- Tuesday Mar 6 –
    - Preparation: Introduction to gene expression (please give yourself plenty of time for this one)
    - Preparation: Controlling gene expression
    - Finish human genetic disorders
    - Control of gene expression – how the environment can influence phenotype
    - Slide set to be posted in Files: Pedigrees.pdf
- Thursday Mar 8 –
    - "Mini-exam #3 – "Sex 1-3," Human genetic disorders & pedigrees
    - Finish control of gene expression (if not finished on Tuesday)
    - Begin epigenetics

- Slide set to be posted in Files: Altitude.pdf

~ SPRING BREAK ~

NOTE: Watch for additional pre-class assignments (in preparation)

- Tuesday Mar 20 –
  - Preparation: internet research into bone, blood and the circulation (see Bone_blood.pdf in Files)
  - Finish epigenetics
  - Begin bone, blood, and the circulation (what do they all have in common?)
  - Slide set to be posted in Files: Epigenetics.pdf
- Thursday Mar 22 –
  - Preparation: assignment titled "Organelle functions"
  - Preparation: peruse the document in Files titled "Elite_8_S18.pdf"
  - Finish bone, blood and circulation
  - Begin preparation for the Great Organelle Debate
  - Slide set to be posted in Files: Blood_n_bone.pdf
- Tuesday Mar 27 –
  - The Great Organelle Debate (as much as we can accomplish in 75 min, that is)
- Thursday Mar 29 –
  - Bacteria and viruses; are we in danger of running out of antibiotics; how can we slow the inevitable path to becoming defenseless against "hostile" bacteria?
- Tuesday Apr 3 –
  - To vaccinate or not to vaccinate –vaccination, scientific fraud and its consequences, case studies related to the "vaccination controversy"
  - Slide set to be posted in Files: Resistance_is_futile.pdf
- Thursday Apr 5 –
  - "Mini-exam" #4 – Controlling gene expression, epigenetics, organelles, bone, blood, circulation
  - Tissue regeneration and cloning; biology of cancer; dare we "resurrect" extinct animals?
  - Slide set to be posted in Files: Cloning_cancer.pdf
- Tuesday Apr 10 –
  - Exploring the human brain; biology behind learning and memory, perception, happiness, pain and addiction
  - Slide set to be posted in Files: Brain.pdf
- Thursday Apr 12 –
  - Personal genomics – What surprises might be in store in your very own DNA? Who are you, really, and where did you come from? What crazy stuff can we do with DNA testing?
- Tuesday Apr 17 –
  - Finish personal genomics
  - [If we have time] Introduction to gene editing & CRISPR – Eugenics? Designer babies? Are genome editing and CRISPR leading us toward a race of "super humans?"
  - Slide sets to be posted in Files: Personal_genomics.pdf; Belyaev's_pets.pdf
- Thursday Apr 19 –
  - What is a biology course without at least one lab class? Welcome to the microscope lab!

~ FINAL EXAM Thursday 26-Apr 9:00 am - noon in ABL 124 ~

Additional suggested topics

These were great suggestions. Unfortunately, we did not have time to get to them.

- Medical marijuana
- GMOs – pros and cons
- Biology and nuclear weapons; biological weapons
- Animal research and testing – what has it accomplished; ethics of animal experimentation

Honor code policy

Unless otherwise indicated, assignments are "open resource" and "open to collaboration among members of your group." Otherwise, any restrictions will be identified at the beginning of the assignment description and announced in class. Open resource means that students may have access to their notes, posted resources, internet, texts, library materials, and any other reference materials while working on an assignment. Open to collaboration among members of your group means that you are encouraged to work on an assignment with others in your assigned study group but must not seek help from other individuals.

Every final product must be prepared in your own words – you are not to plagiarize. For example, you must not simply quote directly from web sites. Please consult the document on academic integrity that I've posted in Resources if you are not sure what constitutes acceptable behavior.

Absences, late arrivals, and late assignments. The honor code applies to requests to be excused from participation or for permission to submit an assignment late. Legitimate excuses for missing class include circumstances beyond your control such as illness, death in the family, travel for athletics, graduate school interviews, etc. Students arriving late to class without an acceptable excuse will receive partial credit for attendance. Any student experiencing a problem submitting an assignment must contact the instructor immediately. Ten percent of the available score will be deducted per day an assignment is late. If you know in advance of a planned activity that will take you out of class, you are expected to notify the instructor as soon as you are aware of the activity. This requirement includes activities that are on your schedule at the beginning of the semester.

Learning activities

In class we will conduct presentations, group discussions, and hands-on activities. We will also use an audience response system (Socrative) for voting, to check your understanding of concepts, and to address misconceptions. You will need a cell phone or laptop computer to access Socrative. In class you are expected to use electronic devices solely for course-related activities. Shopping online or scanning through Facebook, for example, may result in a zero for the day's class participation score. To promote full participation in class and to avoid distractions, the instructor may ask you to silence or shut off electronic devices and/or to keep your laptops closed.

Every pre-class preparation assignment, day's participation, and minute question (see below) counts equally toward your learning activity score ***subject to instructor override, if applicable.***

Pre-class preparation. Most classes will require completing some sort of pre-class assignment, either individually or as a group. Assignments may include online quizzes, which may or may not be graded. Graded assignments will be identified as such.

- You will receive full credit for a pre-class assignment if you complete the work and attend the corresponding class
- If you complete a pre-class assignment but miss the corresponding class, then the assignment will not count toward your course grade
- If you fail to complete an individual pre-class assignment or your part of a group assignment, a zero will be recorded

Participation. Your on-time attendance and full participation in class activities are essential. You will receive a score of 100% for each day that you arrive in class on time and give the class your full attention and effort.

Minute questions. In many classes you will be given 1 to 3 minutes to answer a question on an index card that will be passed out some time during class, often at the very start. Minute questions will be graded and will count toward your final grade in the class. Because minute questions assess students' retention of material presented in the prior class, students missing a class due to illness or family emergency will not be held responsible for correctly answering a minute question during the following class. Students missing class due to travel or other planned absences are expected to review the missed material on their own, and will be responsible for the corresponding minute question.

Instructor override. I reserve the right to modify your participation grade based upon your level of engagement in the class. I might override a low participation score for a student who misses an assignment or two but is otherwise enthusiastic about the class and contributes significantly to its success. I may also have to reduce a participation score for any student who detracts from the success of the course. Perhaps the most egregious of offenses, aside from an honor code violations, is failure to prepare. If a student fails to prepare for a class presentation, for example, resulting in lost class time and/or requiring me to take over the presentation, the penalty will be 50% of the participation grade. A second such incident will result in loss of the entire participation grade. Of course, no one will risk that steep a penalty, right?

Exams

Midterm "mini-exams," 30 min each, will be given in class. There will also be a cumulative final exam. A student must provide at least a week's advance notice if he/she will miss an exam due to circumstances beyond his or her control. In such cases the student may take the exam early at an alternative time and place. Only in the case of a sudden illness, family emergency, or other unexpected event will a makeup exam be given after an exam is missed. The instructor reserves the option of providing makeup exams that are different from the corresponding scheduled exams.

Students with disabilities

Any student with a documented disability needing adjustments or accommodations is requested to speak with the course coordinator during the first two weeks of class. All discussions will remain confidential. Such students should also contact Disability Support Services in the Ley Student Center.

Course grade

Please check the gradebook frequently and report any errors or omissions. The breakdown of your course grade will be as follows:

- Learning activities, 20%
- Midterm exams, 50%
- Final exam, 30%

Grade cutoffs are as follows: ≥ 97% = A+; 93-97 = A; 90-93 = A-; 87-90 = B+; 83-87 = B; 80-83 = B; 77-80 = C+; 73-77 = C; 70-73 = C-; 67-70 = D+; 63-67 = D; 60-63 =

Course Summary:

Date	Details	
Tue Jan 9, 2018	Group behaviors (https://canvas.rice.edu/courses/9903/assignments/59230)	due by 10:50am
	Scientists (https://canvas.rice.edu/courses/9903/assignments/59235)	due by 10:50am
Thu Jan 11, 2018	Evolution background (https://canvas.rice.edu/courses/9903/assignments/62081)	due by 10:50am
Tue Jan 23, 2018	Natural selection background (https://canvas.rice.edu/courses/9903/assignments/63163)	due by 10:50am
	Pre-class assessment – biology background (https://canvas.rice.edu/courses/9903/assignments/59238)	due by 10:50am
Thu Jan 25, 2018	Case studies in natural selection (https://canvas.rice.edu/courses/9903/assignments/63864)	due by 10:50am
Tue Jan 30, 2018	Exam 1 part 1 (https://canvas.rice.edu/courses/9903/assignments/64538)	due by 10:50am
	Exam 1 part 2 (https://canvas.rice.edu/courses/9903/assignments/64533)	due by 11:59pm
Thu Feb 1, 2018	Elements (https://canvas.rice.edu/courses/9903/assignments/64657)	due by 10:50am
Tue Feb 6, 2018	Biological molecules (https://canvas.rice.edu/courses/9903/assignments/63898)	due by 10:50am

Date	Details	
Tue Feb 13, 2018	Biomass (https://canvas.rice.edu/courses/9903/assignments/63903)	due by 10:50am
	Meiosis and mitosis (https://canvas.rice.edu/courses/9903/assignments/64123)	due by 10:50am
Tue Feb 20, 2018	Exam 2 (https://canvas.rice.edu/courses/9903/assignments/55040)	due by 10:50am
	Gender (https://canvas.rice.edu/courses/9903/assignments/64659)	due by 10:50am
Thu Mar 1, 2018	Mutations and human pedigrees (https://canvas.rice.edu/courses/9903/assignments/67556)	due by 10:50am
Tue Mar 6, 2018	Inroduction to gene expression (https://canvas.rice.edu/courses/9903/assignments/64274)	due by 10:50am
Sun Mar 11, 2018	Mini-Exam 3 (https://canvas.rice.edu/courses/9903/assignments/68327)	due by 6pm
Thu Mar 22, 2018	Organelle functions (https://canvas.rice.edu/courses/9903/assignments/55034)	due by 10:50am
Thu Apr 5, 2018	Exam 4 pt 1 (https://canvas.rice.edu/courses/9903/assignments/69582)	due by 10:50am
	Exam 4 (https://canvas.rice.edu/courses/9903/assignments/70615)	due by 12:05pm
	Controlling gene expression (https://canvas.rice.edu/courses/9903/assignments/64933)	
	Exam 3 (https://canvas.rice.edu/courses/9903/assignments/55043)	
	Final (https://canvas.rice.edu/courses/9903/assignments/55044)	
	Participation (https://canvas.rice.edu/courses/9903/assignments/55046)
